

# Teaching and Applying Statistical Engineering in Brazil

Webinar ISEA

---

Andressa Siroky & Carla Vivacqua

December 2023

1. Where we are and Who we are
2. What is Statistical Engineering (SE)
3. How we started teaching and applying SE
4. Our experiences with SE in Brazil
  - Building Capacity
  - Building Relationships
5. Final considerations

# Federal University of Rio Grande do Norte

---

## Where we are

[https://no.wikipedia.org/wiki/FriA\\_large\\_blank\\_world\\_map\\_with\\_oceans\\_marked\\_in\\_blue.PNG](https://no.wikipedia.org/wiki/FriA_large_blank_world_map_with_oceans_marked_in_blue.PNG)

## Who we are

---

# Who we are

- Andressa Siroky
  - assistant professor in the Statistics department at UFRN, Brazil;
  - deputy coordinator of the Applied Statistics Laboratory;
  - coordinates the Statistical Engineering project;
  - B.S. and M.S. in Statistics from UFRN and Ph.D. in Statistics from University of São Paulo.
- Carla Vivacqua
  - full professor in the Statistics department at UFRN, Brazil;
  - sabbatical leave to work on a big data and climate change project in NORCE, Norway ;
  - main research areas: design of experiments and applied statistics;
  - Ph.D. in Industrial Engineering from the University of Wisconsin-Madison, USA.

# What is Statistical Engineering?

---

# What is Statistical Engineering?

The International Statistical Engineering Association (ISEA) defines **Statistical Engineering** as:

“the study of the systematic integration of statistical concepts, methods, and tools, often with other disciplines, to solve important problems sustainably.”

# What is Statistical Engineering?

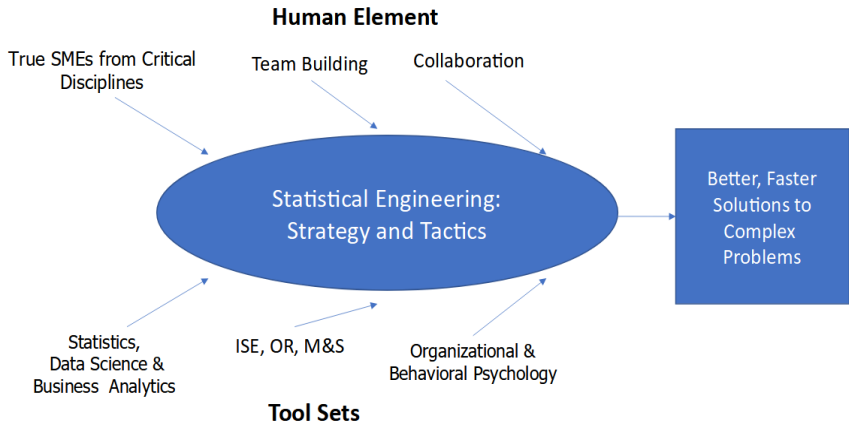

The International Statistical Engineering Association (ISEA) defines **Statistical Engineering** as:

“the study of the systematic integration of statistical concepts, methods, and tools, often with other disciplines, to solve important problems sustainably.”

ISEA highlights about SE:

- it is a field of knowledge, a **discipline** and not a collection of tools;
- involves the systematic **integration** of multiple methods and areas;
- it is **not limited** to just statistics or engineering;
- **problem-oriented** and not tool-oriented;
- search for a **sustainable** solution.

# The Integrative Role of Statistical Engineering

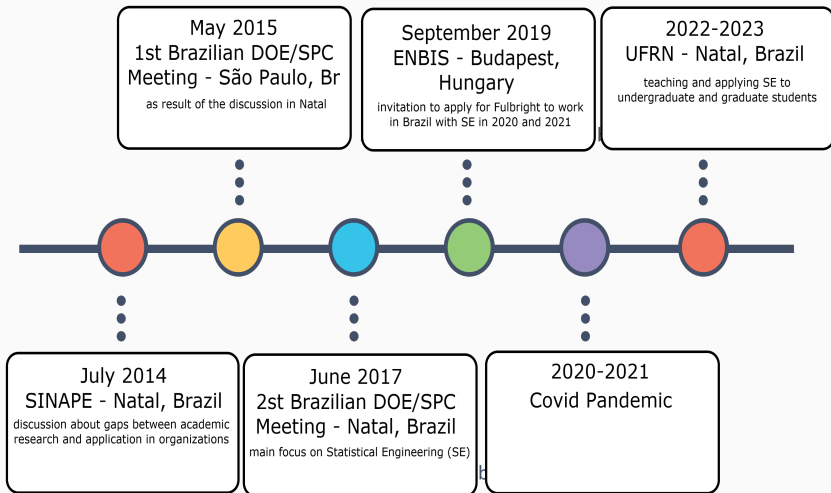

Note: SMEs = subject matter experts; ISE = Industrial and Systems Engineering; OR = Operations Research; MS = Management Science

From Statistical Engineering Handbook, ISEA member website.

## **How we started teaching and applying SE**

---

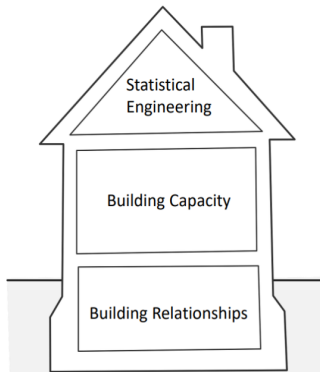

# A brief history of how we started teaching and applying SE

Nothing comes from nothing

# Teaching and Applying SE at UFRN-Brazil

---

## Experience 2022

- Geoff Vinning came to Brazil;
- Geoff's Seminar: Shewhart, Statistical Engineering and Industry 4.0;
- SE training to graduate students for 2 months twice a week;
- Activities were developed within a master's discipline;
- Main focus on ISEA Handbook

## Experience 2023

- Geoff came to Brazil again;
- SE training to undergraduate and graduate students for 2 months twice a week;
- Activities were developed within a project;
- Main focus on **strategy**.
- Andressa's speech about SE in a local event.

## Contents studied

- Big Picture on the Strategy of Statistical Engineering
- Scientific Method
- Case Study: Peter Parker - NASA
- Techniques for generating ideas
- Understanding complexity in problem solving
- Soft Skills
- Organizational Strategy
- Leadership
- Team Charter

# Teaching and Applying SE at UFRN-Brazil | Building Relationships

---

- SADIO - A local seasoning factory;
- We visited SADIO to learn about their process;
- Some opportunities were identified;
- SADIO decided which one we would work;
- We had full support from the owner;
- Unfortunately, we were prevented to continue by a broken machine and a change in the factory layout.

# Building Relationships 2022

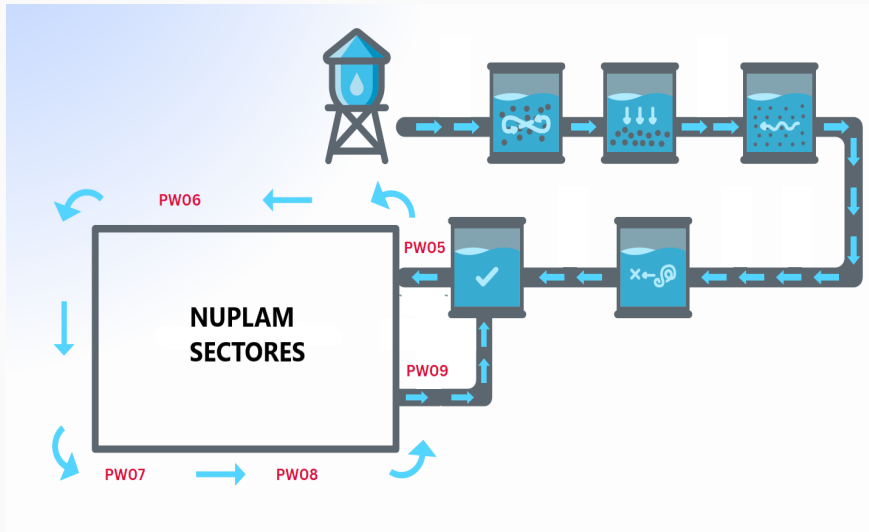

## SADIO - Seasoning Factory

- NUPLAM - Food and Medicine Research Center
- NUPLAM produces medicines for the government;
- They need to monitor the quality of the water that is used;
- Data is collected from their water treatment system in two ways: offline and online;
- Regulator only accept offline data;
- They want to establish a correlation between online and offline data to monitor the entire system using online data.

# Building Relationships 2023

## NUPLAM - Understanding the problem

# Building Relationships 2023

## NUPLAM - Understanding the problem: initial analysis of offline data

# Building Relationships 2023

## NUPLAM - Food and Medicine Research Center

## Final consideration

- For 2024 we intend to continue with the SE project and create a optative curriculum discipline.
- We expect to spread the use of SE for solving problems in a holistic way.
- We expect to contribute to improving the training of students on the UFRN Statistics course;
- And serve as an example of how universities can implement SE into their curricula.
